

# 5 SEXTech FACTS THAT REQUIRE INNOVATION

Presented by FemTech Focus

1

## CHLAMYDIA AND GONORRHEA ON THE RISE

These STIs are common in the United States and the spread is on the rise. Innovation to stop the rising numbers is needed.

2

## LACK OF DIVERSITY

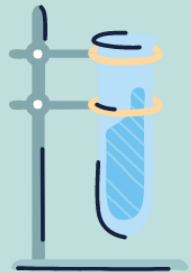

Cis men dominate technology. In order to create more innovative sextech products, a diverse group of founders and creators are needed.

3

## NO ALL-IN-ONE SCREENING

Different STIs require different procedures. Screening at the doctor's office does not test for all STIs.

4

## DENTAL DAM INACCESSIBILITY

Used to stop STI transmission during oral or anal sex, dental dams aren't as widely available as other types of protection.

5

## SEX EDUCATION UPGRADE

Leverage new technologies, like VR, to teach sexual consent education.
